

# EVA Pigeon & Pole Assembly Instructions

This is the bag contents.

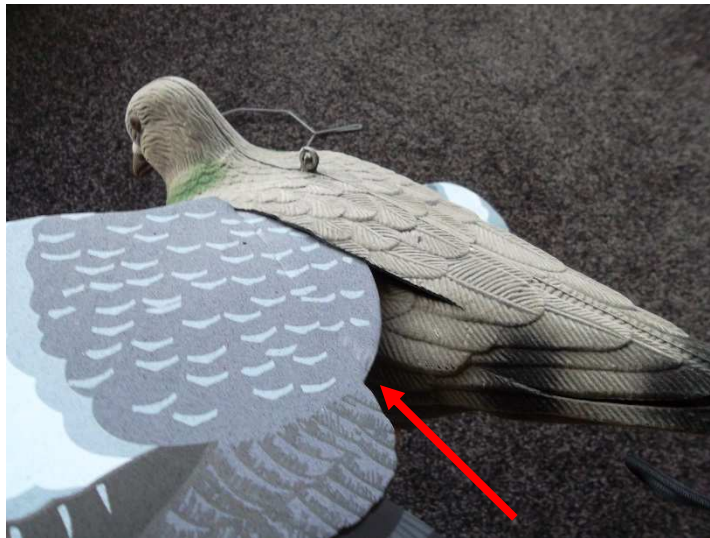

There should be no cutting required, there should already be slots for the wings & Tail Just above the 2 small holes for the cradle.

Pull the lower edge of the slot down as below

Slide the wing into the slot

Then push the wing until it will not go any further, to the curve shown.

Repeat for the opposite side.

Locate the slot for the tail and open it.

Slide the tail into the slot and push fully home

Push the cradle into the 2 holes (this may not be required at this time)

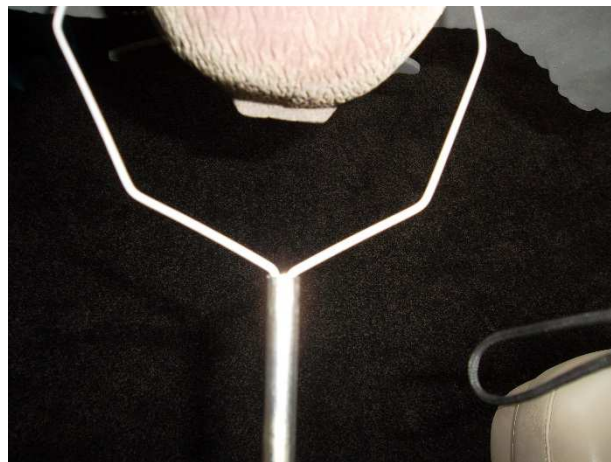

Push the spike of the floater pole into the small hole under the tail

Complete with cradle (Not required)

If you can get hold of a small bit of tube, slide the cradle into the tube.

It can then rock and roll in the tube to add more realism.

Or if you have a dead bird, push the spike up its back end and clip the wings out with the crocodile clips.

(Pretend dead bird)
